eco pur - the innovative
high quality sealant

Visit us at
glasstec 2010
28.09-01.10.2010 in Hall 17, Stand 17C03

eco is going to present its well-established PU Sealant **eco pur** at this year's trade fair Glasstec 2010. The most important feature of this high-quality polyurethane sealant is the fact that it is manufactured without polyBD. It is made of alternative sources of raw materials based on modern and frequently applied technologies. Remarkably, **eco pur** does not contain any mercury. **eco** is economical and ecological as it delivers a classical product in a modern way - being reliable, of high quality, and highly competitive. **eco pur** has been tested in many ways and has received certificates from many European institutes. **eco pur** is already satisfactorily being used by several modern DGU producers on their machines which are from leading manufacturers.

In Europe, **eco** has supplied many DGU producers for years with its wide range of products

such as extruded, painted and coated Georgian bars **Georgia 3000** and high quality molecular sieves **eco mol**.

eco pur has been added to **eco's** comprehensive product line. In view of future needs, manufacturing of this sealant has been located in a competitive region of the European Union, while **eco international** is organizing the international sales and service.

Due to their long-lasting experience, **eco** experts know exactly what the most important features of a sealant are. Firstly, the sealant must be of high quality. Secondly, regular deliveries have to be ensured. Finally, service and price must also be maintained on a level satisfactory to the customer. That's why it's purely **eco - eco pur**.
